

# NEW DESIGNS & PANELS COMPOSITION FOR GARAGE DOORS

Dear customer

We widen our panels offer with **two new designs**, and also we seal the top part of the garage doors **on lintel** now, instead of on top section, in standard configuration of the doors (see PI 162). In connection to this change we have also adjusted slightly the panel's composition of doors. This change ensures unifier visual design from the exterior look.

There is a picture father, showing panels composition of the specific heights of the openings. The shown compositions are valid for doors without pass doors and without FVE aluminum sections.

Standard configuration doesn't have to be followed also in case of your specific request – when you ask for visual uniformity for different positions in the order, or for the different orders. This request is necessary to mention in your order.

As we do understand there can be certain reasons you prefer other panels compositions, we will process the orders based on your requests, if technically possible. The surcharge you can find in related price list.

New panels composition will be followed item-by-item, with selling the old panels out. Now, from 16th November we start new composition already with items 131, 137, 138, 660, 661, 662 and 663.

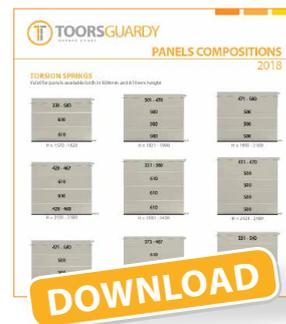

## NEW PANELS DESIGNS 661 AND 662
