COLOUR FOIL

Dear customer,

This Product Info brings you an overview of colour foils to be applied on our sectional doors. In spite of especially a design method, for sure a protective function of those foils increasing the life time of the complete door leaf cannot be left out of consideration.

Foils are offered in many colour options. From the technological point of view it concerns multilayer foils with stamping and medium hard prime foil. Colour foils can be applied only on the outer side of panels with smooth sheet (flat smooth). Foils cannot be used on stucco and woodgrain and for panels with central rib surfaces due to heterogeneous adhesive capacity of the foil on sheet stamping. Foils can be applied on door width from 2000 mm up to 6000 mm.

The main advantage of foils is weather resistance and resistance against UV radiation. Foils are also good at resistance against chemical retardants, usually used for household maintenance. Of course an important role for keeping the variety of colours and protective features is played by the care and maintenance. We recommend regular cleaning by smooth cloth, if necessary you can use soap water solution. To avoid polishing agents, abrasive solids or organic solvents. We recommend to test a reaction of any kind of cleaning substance first on a less visible spot.

FOIL ON STOCK (see page2):
